<u>Checklist for Submission of Soil Erosion and Sediment Erosion Plan</u> <u>Upper Delaware Conservation District</u>

Yes	No	N/A		
			A.	Application form - front
				Owner / applicant signature
				2. Applicable fees
				3. Agent responsible
				4. Ownership Disclosure Statement
			В.	One complete set of plans which includes the SESC plan.
			C.	Two copies - soil erosion plan, numbered in sequence in the full set
				Temporary and permanent stabilization measures .
				2. SESC Notes and Details
				a. Sediment barriers \ silt fence \ hay bales
				b. Inlet protection
				c. Construction tracking pad
				d. Staging area
				e. Detention / Retention Basin
				f. Temporary sediment riser with elevations for 50% trap
				efficiency / alternate method of dewatering
				g. Emergency spillway location and elevations
				h. Low flow channel
				i. Riprap aprons at 0.0%
				j. Steep slopes detail
				k. Location of stockpiles
				I. Legend of Details / SESC Measures
				m. Upper Delaware Soil Conservation District General Notes
				Sequence of Construction with duration of time(s)
				4. Locations on plan where E&S measures shall be installed.
			D.	, , ,
			E.	·
			F.	
				Pre-developed including all off-site areas which drain to project
				site and drain to the discharge point.
				2. Post developed drainage area maps with all sub-watersheds
				labeled which drain to the project site and shall drain to the
			_	discharge point.
			G.	HYDROLOGY REPORT
				Indexed and sequentially numbered pages.
				2. Stability analysis
				a. TR 55 used for peak Q's and volume determinations for basin
				b. Pre and Post time of concentration justified by showing each
				segments flow length, slope and ground cover.
				c. TR55 curve numbers justified by how many acres are in each
				aroup cover type to determine the weighted CN.

			 d. Discharge rates for the 2 & 10 year rainfall events.
			e. Drainage area map for existing conditions pre-development.
			 Drainage area map for post development.
			g. 2 and 10 year rainfall events and stage-storage calculations.
			h. Storm sewer calculations.
			 i. Calculations and design for conduit outlet protection
			j Calculations and design for grassed waterways / swales
			k Calculations for other hydraulic conveyance structures
			 Sediment basin calculations.
			 Method I "Trap efficiency" per NJ Standards for Soil Erosion and Sediment Control.
			Method II "Sediment Storage Capacity & Minimum Volume
	Ш	П	for Temporary Floodwater Storage".
			3. Elevation of sediment risers for 50% trap efficiency.
			4. Shape and depth calculations of sediment basin.
ш	ш	Ш	4. Chape and depart odiodiations of scalment basin.
			 H. GEOLOGICAL REPORT 1 Provide a determination as to whether <u>Karst</u> features are in the site and accounted for in the pre-developed analysis.
II.	PE	RMI	TS AND EASEMENTS
			A. Planning Board Resolutions
			B. Off-site discharge easement
			C. Additional Permits
			1. Wetlands permit
			Stream encroachments permit
			3. Dam permit
			4. Stormwater Discharge Permit. (RFA)
